

Next Generation Sequencing in Clinical Diagnostics

SciLifeLab and Uppsala University Hospital organize the symposium Next Generation Sequencing in Clinical Diagnostics April 4, 2014.

Internationally recognized clinicians and scientists will give state-of-the-art lectures and provide examples how next-generation sequencing can be applied in the diagnostic setting. The symposium will cover next-generation sequencing in diagnostics of cancer, hematological malignancies and inherited diseases. The diagnostic and bioinformatic challenges as well as ethical questions, such as reporting of incidental findings, will also be discussed. The newly established national SciLifeLab Clinical Sequencing Facility will also report on its current and planned activities.

The overall aim of this open symposium is to give important insights how next-generation sequencing can be transferred into the health-care system, but also to discuss future directions within this rapidly progressing and very promising field.

The symposium will be held at Rudbeck Laboratory in Uppsala.
